Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 8, Application US/09839497A
Patent No. 6528295
GENERAL INFORMATION:
APPLICANT: Pallas, David C.
APPLICANT: Du, Xianxing
TITLE OF INVENTION: Coding Sequence for Protein Phosphatase Methylesterase,
Patent No. 6528295
TITLE OF INVENTION: Recombinant DNA Molecules and Methods
FILE REFERENCE: Docket No. 6528295 105-97A
CURRENT APPLICATION NUMBER: US/09/839,497A
CURRENT FILING DATE: 2001-04-20
CURRENT FILING DATE: 2001-04-20
CURRENT FILING DATE: 2001-04-20
CURRENT FILING DATE: 2001-04-20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PRIOR APPLICATION NUMBER: 60/082,202

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 24 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 334
                                                                                                                                                                                                                                                                               USA
```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanaee, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the left is RP11-372J12, the clone sequenced to the right is RP11-588I4. base position 68584 of RP11-259N19. 2000 bp overlap; Actual end is at

FEATURES Polymorphisms have been identifed between AC007387 and AC019069 Location/Qualifiers

New ovary specific genes and proteins, useful as a vaccine for treating patients with ovarian cancer, or for diagnosing and monitoring the presence and metastases of ovarian cancer in a patient.

Claim 1; Page 173-174; 260pp; English.

ABN87790 to ABN87882 represent human ovary specific nucleic acid (OSNA) sequences, and ABB79297 to AB879370 represent ovary specific protein (OSP) sequences from the present invention. OSNA and OSP sequences have cytostatic activity, and can be used in vaccine production and gene therapy. An antibody that specifically binds to an OSP can be used for treating a patient with ovarian cancer, particularly for inducing an immune response against the ovarian cancer cell expressing the CSNA or OSP. The OSNAs and OSPs can also be used for diagnosing and monitoring the presence and metastases of ovarian cancer in a patient

Claim 4; SEQ ID NO 619; 2081pp + Sequence Listing; English.

The invention relates to novel genes (ABL8944-ABL90853) and proteins CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating CC (ABB89040-ABB90444) useful for preventing, therapy. The genes are conditions e.g. by protein or gene therapy. The genes are conditions e.g. by protein or gene disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, the contract of the protein of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, correct of the contract disease, contract of the contract diseases e.g. cerebral anoxia and epilepsy; and (f) confections. Mote: The sequence data for this patient did not form part of the printed specification, but was obtained in electronic format directly contract of the printed specification, but was obtained in electronic format directly contract of the printed specification, but was obtained precised to the contract directly contract of the printed specification, but was obtained in electronic format directly contract of the printed specification, but was obtained precised to the contract directly contract of the contract of the printed specification, but was obtained precised to the contract directly contract of the contract of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a nucleic acid molecule designated Gene 48 from Ct the human cDNA clone HFCAI74 (deposited as clone ATCC 97899 and ATCC 209045) which encodes a secreted human protein. The gene can be used to CC generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability of the fused CC protein as compared to the human protein only. The invention relates to CC 186 novel genes and their fragments (nucleic acid sequences AAV59511-CC V59812; amino acid sequences AAW74731-W75026) which are useful for CC preventing, treating or ameliorating medical conditions e.g. by protein CC or gene therapy. Also, pathological conditions can be diagnosed by CC determining the amount of the new polypeptides in a sample or by CC determining the presence of mutations in the new polynucleotides. CC Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for CC described uses)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated protein that is one of 186 human consecreted proteins; given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a comparison used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep! Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. Alzheimer's disease, cat angiogenesis, nervous system disorders e.g. Alzheimer's disease, cat infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound the aling and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a cDNA derived from a gene encoding one of the novel human secreted proteins of the invention. Note: obtained in electronic format directly from USPTO at sequence didinot form part of the printed specification, but was sequence. Atml?DocID=6420526B1

The present invention relates to the isolation of novel human secreted CC proteins and the polynucleotide sequences encoding them. The invention CC also discloses vectors, host cells, antibodies, and recombinant methods CC for producing human secreted proteins. The polypeptide and polynucleotide CC sequences for the secreted proteins. The polypeptide and polynucleotide CC ameliorating or diagnosing medical conditions such as hyperpoliferative CC disorders (e.g. leukaemia or breast cancers), wounds, reproductive CC disorders, blood-related disorders (e.g. haemophilia or CC thymic hypoplasia), autoimmune disorders (e.g. wiskott-Aldrich syndrome or thymic hypoplasia), autoimmune disorders (e.g. graft-versus-host disease, CC multiple sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), CC multiple sclerosis or Hashimoto's thyroiditis), allergies (e.g. angina CC viral or bacterial or fungal infections (e.g. AIDS or sepsis), renal CC disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, cerebral ischaemia or congenital heart defects), respiratory CC disorders, neurological disorders (e.g. Alzheimer's disease or CC parkinson's disease), and inflammations (e.g. Crohn's disease). The CC polynucleotide or polypeptide may also be used as vaccine adjuvants. CC MOB2641-ACD82950'encode human secreted proteins or their fragments. CC specification, but was obtained in electronic format directly from the crossory as size at each seafular austra CC/Mainanniberry. Amil

TGAGAGGGACTTGCTGGGCCTT 577

New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or p coagulation disorders. or platelet

Claim 1; SEQ ID NO 94; 1012pp + Sequence Listing; English

muleotide sequence selected from any of 948 sequences (ABZ11119C ABZ12066) or their mature protein coding portion, active domain coding
protein or complementary sequences. The polynucleotides are useful for
identifying expressed genes or for physical mapping of human genome. The
c encoded polypeptides (ABP68902-ABP6984) are useful as molecular weight
c markers, as a food supplement, for generating antibodies, in medical
imaging, screening and diagnostic assays and for treating cellproliferative disorders (cancer), neurodegenerative diseases (Parkinson's
c proliferative disorders (cancer), neurodegenerative diseases,
c r Alzheimer's disease), autoimmune diseases (multiple sclerosis,
c r Alzheimer's disease), autoimmune diseases (multiple sclerosis,
c platelet or coagulation disorders, myeloid or lymphoid disorders, liver
c platelet or coagulation disorders, wound, burns, incision, ulcers, liver
c platelet or coagulation disorders, wound, burns, incision, parastic),
c platelet or coagulation disorders, myeloid or long fibrosis, infections (bacterial, viral, fungal, parastic),
c platelet or coagulation disorders, myeloid or long fibrosis, infections (bacterial, viral, fungal, parastic),
c printed specification, but was obtained in electronic format
c directly from WIPO at ftp.wipo.int/pub/published_pct_sequences relates to an isolated polynucleotide (I) comprising Ø

δ 뮍 Ś 跊 8 片 Ś 片 맑 Matches Query Match Best Local : The present sequence encodes a breast tumour-associated protein. It was shown to have at least two-fold overexpression in breast tumour tissue. The invention relates to an isolated polypeptide comprising at least an immunogenic portion of a breast tumor-specific protein, or its variant that retains the ability to react with antigen-specific antisers. The breast tumour polymucleotides, polypeptides and antibodies are useful for inhibiting development of breast cancer. The polymucleotides may be used to design primers and probes for detecting and monitoring breast cancer New polypeptides encoded by polynucleotide sequences over-expressed breast tumor tissue are useful to detect, monitor and treat breast 11-OCT-2000; 2000WO-US028255 WO200127276-A2 Human; Human breast tumour protein cDNA 15964. 18-JUN-2001 AAF82505 Claim 13; Page 50; 52pp; English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                 The invention relates to a new isolated nucleic acid termed ovarian consecution specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that concides any of 53 fully defined protein sequences appearing as ABU61018-CR ABU61070 (termed ovarian specific proteins, OSP); (b) any of 76 fully defined nucleotide sequences appearing as ABU92187-ABU92262; or (c) a sequence having at least 60% sequence identity to the nucleic acid molecule of (a) or (b). Also included are a method for determining the comprising an OSNA, a host cell comprising the vector, an isolated OSP polypeptide, an anti-OSP antibody or fragment, a method for determining the presence of an ovary specific protein in a sample and vaccine comprising an OSP or OSNA. The methods and compositions of the present congrising an OSP or OSNA. The methods and compositions of the present invention are useful for identifying, diagnosting, monitoring, staging, imaging and treating ovarian cancer and non-cancerous disease in ovary consisted. The present sequence is an OSNA of the invention

The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to mucleic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human cDNA sequence differentially expressed in aggressive

Claim 1; SEQ ID NO 459; 179pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, cc and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cc in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore mormal cc activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polympide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in effection, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
